Welcome!

Presentation slides and materials:

Link to HU-Box will be shared in the chat and afterwards again via e-mail

Questions:

Either in the chat or via the blue hand below the list of participants

Website Research Data Management:

Publisher policies – example Wiley

„We encourage authors of articles published in our journals to share their research data including, but not limited to: raw data, processed data, software, algorithms, protocols, methods, materials.“

Four standardized data sharing policies:

1. Encourages data sharing
2. Expects data sharing
3. Mandates data sharing
4. Mandates data sharing and peer reviews data

Source: <https://authorservices.wiley.com/author-resources/Journal-Authors/open-access/data-sharing-citation/data-sharing-policy.html>

Research funders

European Commission Horizon 2020

German Research Foundation

Wellcome Trust

National Science Foundation

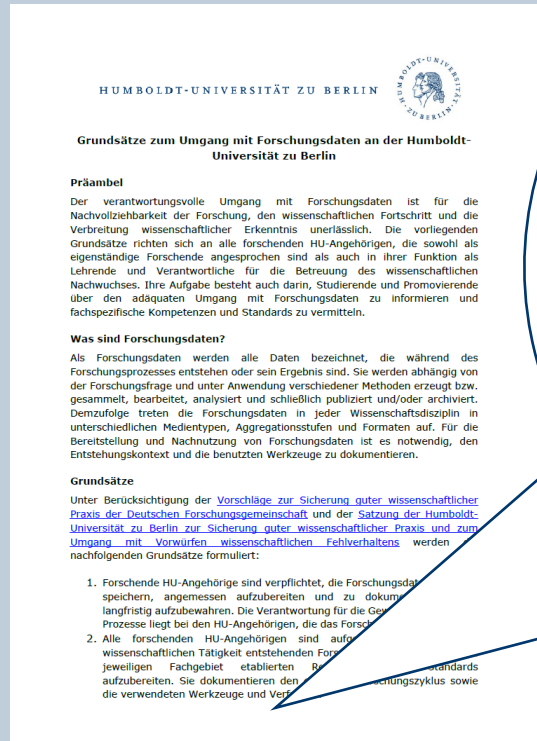

Federal Ministry of Education and Research

Volkswagen Foundation

Research Data Policy

Policy

„HU researchers should take responsibility for deciding at what time and on what legal terms research data may be accessed.“

“Research data underlying scholarly publications should be archived for the long-term and/or published in an appropriate trustworthy data archive or repository.“

Your way to data publication

Photo: CC0

Data selection – some criteria

- ✓ Data underlying a publication
- ✓ Data necessary to understand methodological approach (verification)
- ✓ Milestone version
- ✓ Uniqueness/of interest to others
- ✓ Costs
- ✓ Rights
- ✓ Data quality
- ✓ Documentation
- ✓ Technical maintenance

Exercise: Which data will I publish?

Think about your research data. Which files would you like to publish?

- Write down which data/files you would like to publish.
- Also think about what kind of data would be needed for your own dissertation to be understood properly.

Time: 2 minutes

Rights

- Data protection and personal rights
 - Anonymization or pseudonomization
 - Informed consent (analysis + data publication)
 - Support from data protection officers
 - Information at <https://www.forschungsdaten-bildung.de>
- Copyright law
 - Licenses
 - Contracts
- Exploitation rights from publisher or university

Your way to data publication

Data Publication

Where to publish?

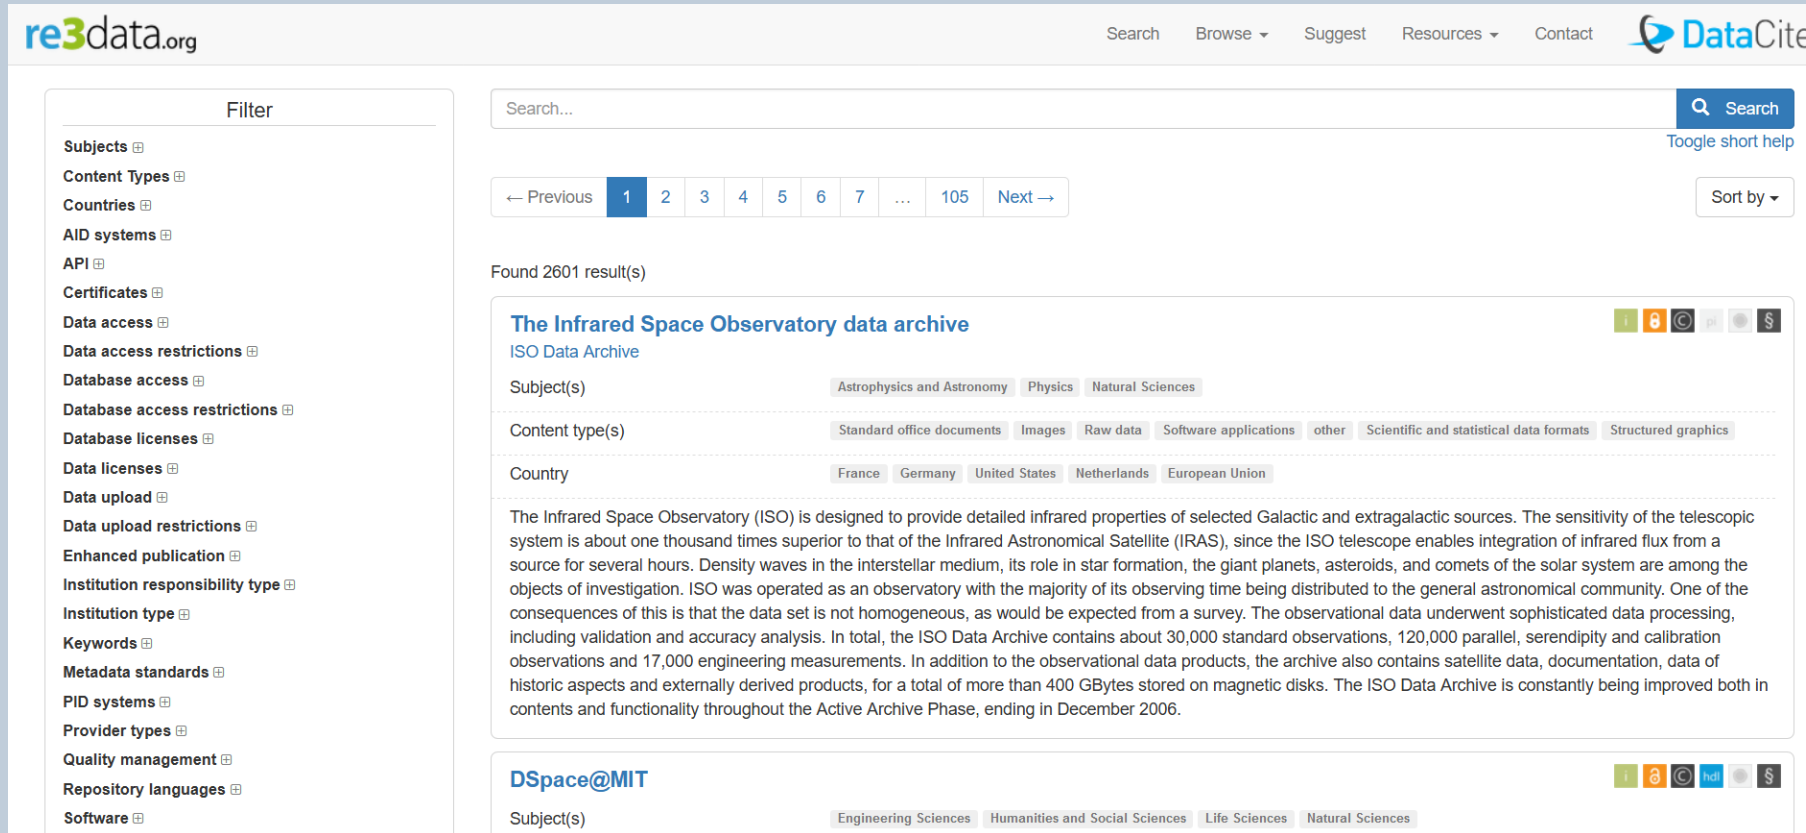

What to publish?

Why publish data?

Photo: CC0

Finding a data publisher

The screenshot shows the re3data.org website interface. On the left is a 'Filter' sidebar with various categories like Subjects, Content Types, Countries, etc. The main area features a search bar, a pagination control showing page 1 of 105, and a 'Sort by' dropdown. Below the search bar, it says 'Found 2601 result(s)'. The first result is 'The Infrared Space Observatory data archive' by ISO Data Archive. It includes subject tags (Astrophysics and Astronomy, Physics, Natural Sciences), content type tags (Standard office documents, Images, Raw data, Software applications, other, Scientific and statistical data formats, Structured graphics), and country tags (France, Germany, United States, Netherlands, European Union). A detailed description of the ISO Data Archive follows. The second result is 'DSpace@MIT' with subject tags (Engineering Sciences, Humanities and Social Sciences, Life Sciences, Natural Sciences).

<https://www.re3data.org>

How to choose a data repository?

-  Does the repository have a certificate (e. g. Data Seal of Approval)?
-  Are persistent identifiers assigned (e. g. DOI, handle)?
-  How is access to the data (open, restricted, inaccessible)?
-  Are the terms of use and license of the data mentioned by the repository?

If you do not find an appropriate data repository...

Generic repositories:

- Zenodo, <https://zenodo.org>
- Figshare, <https://figshare.com>
- DRYAD (life sciences), <http://datadryad.org>

Institutional repositories:

- edoc publication server (HU Berlin), <https://edoc.hu-berlin.de>
- DepositOnce (TU Berlin), <https://depositonce.tu-berlin.de>
- Refubium (FU Berlin & Charité), <https://refubium.fu-berlin.de>

Data Journals

A data paper documents and describes research data to facilitate dissemination and re-use. It informs about data collection, features and potential reuse.

Examples:

- Scientific data
<http://www.nature.com/sdata>
- Data in Brief
<http://www.journals.elsevier.com/data-in-brief>
- Data
<http://www.mdpi.com/journal/data>

Your way to data publication

Photo: CC0

Metadata

- Serve primarily to **find** the data (e.g. principal investigator, time, location)
- Many disciplines have their own standards
- A discipline-specific **overview** of metadata standards can be found at:
<http://rd-alliance.github.io/metadata-directory/subjects/>
- Help: [Subject librarians of the University Library](#)

Metadata

- Title
- Author/Primary researcher
- Identifier
- Keywords/Topic
- Dates
- Funder
- Language
- File format
- Unit
- Method
- Sources
- Place
- Rights
- File name(s) and relation to other files

Assigning keywords

- Thesauri and classifications are documentation languages used to describe the content of objects (e. g. research data)
- This makes it easier to find the data
- There are already specialized classifications and thesauri for many disciplines

Overview: Basel Register of Thesauri, Ontologies & Classifications
<http://www.bartoc.org>

Why an additional documentation?

Study

Variable

Code

Observations

Readme

- Documents the research process and the data
- Includes:
 - Abstract
 - Hypotheses
 - Information on the collection of data (methods, units, time, place, devices)
 - Measures for data cleansing (deletion of outliers, weighting)
 - Structure of the data and its relationships to each other
 - Explanation of variables, labels and codes
 - Differences between different versions
 - Information on access and terms of use

Data preparation

- Do you have all the data necessary?
- Is it the right version?
- Are file names and properties of files logic?
- Are file formats appropriate (depends on repository)?
- Do you have all necessary metadata?
- Have you prepared a documentation in form of a readme?

Licenses for research data

Why do you need persistent identifiers?

10 things to know about ORCID

1. Stands for Open Researcher and Contributor ID
2. (alpha-)numeric 16-digit code
3. Unambiguous scientific identity (beyond name change or typing errors)
4. Used by journals, research funders and institutions as an authoritative file
5. Is maintained by the researcher
6. Lasts longer than an email address
7. ORCID creation takes about 30 seconds
8. Operated by non-profit initiative
9. Continuous growth (February 14, 2022: 13.397.934 ORCID IDs)
10. Connection to Web of Science, zenodo, DataCite and others

Let's make a test data publication!

Photograph by
Anja Herwig

Data citation (FORCE11 recommendation)

Author(s) (Publication year): Title of research data. Data repository or archive. Version. Global persistent identifier (preferably as a link)

Example:

Jane Doe, John Doe (2015): *Successfully citing research data*. Humboldt-Universität zu Berlin. Version 1.0. <http://doi.org/10.17172/this-is-an-example-so-do-not-click>

Please note:

Citation practices can vary between subject areas and publishers!

For software please add [software: source code] to the title.

Questions?

Feedback

Rate this workshop and its content!

Please answer the questions in the Zoom survey.

Many thanks for your interest!
